

Laboratory Notes

Laboratory Number: __2__

Examiner Name: Kelli Kinnikin and Ashton Toler

Date & Time	Activity
10/9/17 2:00	First we started our virtual box
10/9/17 2:05	Then we plugged our USB into our computer
10/9/17 2:10	After the USB was connected into our computer, we needed to add the USB to the virtual machine
10/9/17 2:15	There is a USB icon in the bottom right of the virtual machine. We clicked the name of our flash drive and added it.
10/9/17 2:21	Next we entered our virtual machine to double check the USB was connected. We did this with the "fdisk-l" command
10/9/17 2:23	We identified that our USB is labeled as sdb1
10/9/17 2:25	Then, we typed the command "dd if=/dev/sdb1 of=/home//Desktop/IMAGE.dd bs=1M"
10/9/17 3:10	The process completed after roughly 45 minutes and reported 3840+1 records in and 3840+1 records out
10/9/17 3:15	Next, we typed the command "sudo md5sum /dev/sdb1" on the actual USB drive and received a unique value
